

VECKA 5: Mer design, services hantering av resurser

Meeting Agenda (Group: Alpha)

Date: 2020-09-28

Chair: Benjamin Sannholm

Participants: Mathias Drage, Benjamin Sannholm, Bashar Oumari, Pontus Nellgård, Sophia Pham

Objectives (5 min)

- Review and merge last sprint's work
- Task assignment
- Testing
- Prepare RAD & SDD for peer review

Reports (15 min) from previous meeting

- Bashar has been working on a login/registration screen and also integrated Android Jetpack's navigation graph. Bashar's work on filtering broadcasts based on course is finish (story #3).
- Sophia has been working on the Broadcast Information Window and the layout looks better and the functionality of the buttons works except the connection to the database (story #6).
- Pontus has added the "add broadcast" fragment (story #2) and implemented it using Bashar's navigation graph. The broadcast still needs to be added to the DB.
- Mathias Has finished "Collect the users GPS data (position) and add them to the broadcast" (story #2).
- Benjamin has refactored some of the model and database interface to allow for saving to the database. Benjamin also worked on creating a service for keeping broadcasts alive in the background so they can expire when the user is not around the broadcast location anymore (story #9).
- Everyone has merged their work into the master branch.
- No stories other than #3 has been completed since last meeting.

Discussion items and outcomes (35 min)

- We discussed and decided how the GPS abstraction should be integrated.
- How should we merge our work?
 - We have merged our work so now we have a much better prototype.
- What assignments should we have this week?
- How should we prioritize the testing?
 - The testing is being postponed due to prioritization of fixing the architecture of the project.
- RAD & SDD
 - We decided to expand on RAD & SDD on Wednesday after the next meeting.

Assignments (5 min)

- We decided to have the same tasks as previous week because we need to get the basic layout of the project done first and our current stories, which are the base, are not finished yet.

Wrap up

- Next supervision meeting: Wednesday 2020-09-30 at 13:15
- Next team meeting: Wednesday 2020-09-30 at 14:15
